EDUCATION

Smt. Indira Gandhi College of Engineering

Bachelor of Engineering in Computer Engineering

Navi Mumbai, India

August 2023 – May 2027

- GPA: 8.7 / 10 | Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Object-Oriented Programming

EXPERIENCE

Open Source Contributor, Lamatic AI (AgentKit)

Jul 2026

PR #295

Remote

- Built an AI-powered Lamatic AgentKit workflow that crawls GitHub repositories, extracts tech stacks, and matches builders to sponsors.
- Designed a multi-step orchestration flow covering web scraping, structured extraction, database querying, AI matching, and persistence with a Next.js frontend.
- Followed strict open-source standards for configuration schemas, flow structure, and deployment configuration in a 170+ star public repository.

Open Source Software Engineering, Odysseus

Jun 2025 – Present

AI Agent Workflow

Remote

- Implemented backend optimization for UI timing by replacing static delays with dynamic character-length formulas, improving UX and readability across high-frequency notifications.
- Enhanced codebase maintainability through complex PR workflows and multi-round reviews in a large-scale codebase with strict architectural standards.
- Caught and reverted an unrelated security issue caused by a suspicious `docker-compose.yml` change during code review.

PROJECTS

PR Synthesizer | *Node.js, Python, FastAPI, PostgreSQL, pgvector, Redis, BullMQ, React, Docker* [GitHub](#) 2025

- Architected a multi-agent system using the A2A protocol to automate security, database, and performance audits, resolving 10+ critical issues across repositories.
- Engineered a RAG pipeline with pgvector and HNSW indexing using 3072-dimensional embeddings for deep codebase analysis.
- Optimized asynchronous processing with BullMQ and Redis for sub-100ms webhook responses and added OpenRouter to Gemini fallback.

Emergency Response Coordination System | *React, Node.js, Express, Supabase, Render* [GitHub](#) [Demo](#) 2025

- Built a scalable emergency dispatch MVP managing incidents from citizen reporting to real-time unit resolution.
- Designed priority-based unit allocation across emergency categories and geographic locations.
- Implemented real-time incident tracking with an operator dashboard for review and manual dispatch.

Legal RAG API | *Python, FastAPI, LangGraph, Pinecone, Gemini, Docker, Postman* [GitHub](#) 2026

- Built an agentic Q&A API for legal documents using LangGraph, FastAPI, and Pinecone with vector filtering and LLM-based relevance checks.
- Implemented idempotent document ingestion using SHA-256 chunk IDs and Gemini 3072-dimensional embeddings.
- Validated retrieval accuracy with a 15-question Postman evaluation suite across 9 corpus documents.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, C++, C

Frontend: React.js, Next.js, Vite, Tailwind CSS, Recharts, SSE

Backend: Node.js, Express.js, FastAPI, BullMQ, JWT, bcrypt, Passport.js

Databases: PostgreSQL, pgvector, Redis, Supabase, Prisma ORM, Pinecone

AI / ML: Gemini API, OpenRouter, A2A Protocol, RAG, LangGraph, Vector Embeddings, Lamatic AgentKit

Infrastructure / Tools: Docker, Docker Compose, Cloudflare Pages, Git, GitHub, Postman, Linux
